

## CABINET HANDLE CENTRE SIZES

The majority of our cabinet handles are designed around standard centre to centre sizes. Cabinet D handles and pull handles are generally measured centre to centre rather than overall length.

### INDUSTRY STANDARD CABINET PULL CENTRE SIZES ARE :

32 / 64 / 96 / 128 / 160 / 192 / 224 / 256 / 288mm

If replacing existing handles it is essential the centre size of the replacement handle is the same as the original.

If the existing holes are not drilled at standard centre sizes there are a number of options available :

**Leather Strap Handles** – these handles are flexible and the centre to centre size can be adjusted (within reason) to suit.

Please bear in mind the centres we have designated (96 / 128 / 160mm) give the optimum projection; adjusting the centre size will either increase or decrease the projection.
